

BluePoint Email Archiving Services Customer Spotlight

Engineering and Architecture Firm Captures and Preserves Project Data with Email Archiving Services

Overview

Country or Region:

United States

Industry:

Architecture and Engineering

Customer Profile

(Nasdaq: STVi) Provides engineering and architectural consulting and design services on a variety of projects for government agencies and private industry.

Business Situation

Recently converted in-house email systems from Lotus Domino to Microsoft Exchange and wanted to preserve email data related to projects for long term use and sought a comprehensive solution that it could implement quickly.

Solution

STV Incorporated subscribed to a Managed EMail Archiving service.

Benefits

- Gained comprehensive email archiving solution
- Preserved data related to projects and important documents beyond the life of the project
- Eliminated email storage problem

“STV Incorporated needed to capture email data related to projects and preserve important documents beyond the life of the project. The hosted Email Archiving Service gives us the freedom to focus on other important infrastructure issues knowing that all of our email data is captured, sent offsite, and available to us at a moment’s notice. The solution has eliminated our email storage problem and helps us better manage our in-house email systems. “

Ronald Wiseman, Chief Information Officer, STV Incorporated

As one of the country’s top 25 Engineering and Architecture firms STV Incorporated must adhere to many regulatory requirements for monitoring, protection, retention, and retrieval of email messages. In addition, the company needed a consistent end user interface for storing and locating email and other data related to projects for long periods of time. With 1,525 professional, technical and support personnel; the company was looking for a way to better manage the data related to projects and preserve important documents beyond the life of the project. STV did not want to buy, install, and learn EMail Archiving solutions; instead, it sought a trusted partner who could implement a cost-effective, secure, and compliant solution. The company also enthusiastically endorsed Managed EMail Archiving Services for reducing the administrative burden of email management.

“Hosted EMail Archiving Services definitely made the process of capturing email data related to projects and preserving important documents beyond the life of the project hassle free. The solution safely and efficiently stores our data offsite at a security-rich hosting facility and our end users now have a consistent interface for accessing their data.”

Ronald Wiseman, Chief Information Officer, STV Incorporated

Situation

STV is a leading, award-winning professional firm offering engineering, architectural, planning, environmental and construction management services. The company consistently ranks among the country's top 25 firms in education, highways, bridges, rail and mass transit. Throughout the United States, STV offers services to a broad and ever-expanding client base providing planning, environmental, design, program and construction management, and specialty services for the transportation, design-build, institutional and commercial building, advanced technology, industrial and defense markets.

Based in Douglasville, Pennsylvania, STV has additional offices in 16 other states. The company employs more than 1,500 professional, technical and support personnel.

In October 2007, STV reached a critical juncture. The company completed a migration of its messaging platform from IBM Lotus Domino to Microsoft Exchange and required a consistent method of capturing email data related to projects and preserving important documents beyond the life of projects for both regulatory compliance and legal discovery purposes.

Ronald Wiseman, Chief Information Officer of STV, realized that end

users were storing project related data within the messaging platform and required access to the data many years after the life of a project. This created a challenge for his IT staff in managing the mail server environment. Ron needed a way to preserve the data while providing a simple and consistent end user interface. Ron wanted the data to be stored offsite at a security-rich data center but didn't have the time and resources to implement an in-house solution.

“STV realized that it had to bring in an expert if it was going to be up and running quickly”, says Paul Sachse, Chief Executive Officer, BluePoint, Data, Inc. , “...they needed a partner to come in and implement a system that wasn't time consuming or required significant capital outlay.”

End users had been migrated to the new messaging platform and were continuing to store project related data in the mail server, so Wiseman immediately sought out a service-based message archiving system. An outsourced solution would not require additional hardware or software to manage on-premise, transferring the burden of application support to the service provider, and resulting in lower costs and more efficient use of the company's precious IT resources.

Solution

Wiseman chose to take a closer

“Hosted EMail Archiving Services definitely made the process of capturing email data related to projects and preserving important documents beyond the life of the project hassle free. The solution safely and efficiently stores our data offsite at a security-rich hosting facility and our end users now have a consistent interface for accessing their data.”

Ronald Wiseman, Chief Information Officer, STV Incorporated

look at Hosted EMail Archiving Services. Initially, his management team had concerns over the potential security issues of using a service provider, but they were immediately put at ease after viewing the hosting center security features.

Hosted EMail Archiving Services provided a predictable monthly rate and offered significant cost benefits as compared to an in-house solution. The service provider stays up to date on legislative changes or interpretations that may affect the company's compliance to records retention requirements.

STV needed an email archiving solution that provided flexibility and a completely tamper-proof message store. It also had to include a supervisory system for regular review of incoming and outgoing messages, based on statistical sampling. Finally, it needed the capability to search and retrieve project related email data and important documents well beyond the life of a project.

Benefits

With Hosted EMail Archiving Services, STV Incorporated has gained a comprehensive email compliance and archiving service. Messages aimed at STV's 1,500+ professional, technical and support personnel are intercepted and stored in a secure archive. Searching for and retrieving important project related email data and documents has become a painless

process because of the intuitive user interface. And because the archive is accessible by each employee, the administrative burden of recovering past project related email data and documents has been eliminated.

“Rarely do you find a company that delivers a solution that does exactly what it claims. We put the email archiving solution through some rigorous testing and in all instances the service proves its merit,” says Wiseman. “Hosted EMail Archiving services provided all the tools required for off-site message retention and recovery,” says Wiseman. “It also offered a one-stop shop for all our message archival requirements.”

Achieved Efficient Recovery

As projects proceed through the lifecycle and conclude, often times important project related data needs to be discovered and recalled many years after the project. When STV Incorporated faced a situation of needing long term storage and a consistent and intuitive user interface to search and retrieve data, it used the Hosted EMail Archiving service. Using the service, the company can easily locate important email data and documents. Without the solution in place, the organization would have had to access allocations where the email data and documents might exist by digging through backup tapes, file cabinets, desktop computers, and offline media.
