Introduction

VMware ESX is tested for compatibility with a variety of major guest operating systems running in virtual machines. Additionally, VMware ESX is tested for compatibility with currently shipping platforms from the major server manufacturers in pre-release testing. Our goal is to support a variety of storage and network adapters used as standard options for these platforms as they come to market.

vSphere 4.0 requires 64bit hardware . For proper support of the 64bit Guest Operating Systems, necessary virtualization BIOS settings need to be enabled. Please see KB article 1003944 (<http://kb.vmware.com/kb/1003944>)for more information.

In addition, many server vendors started implementing some or all VMware specified CIM providers for server manageability. Therefore, health and monitoring information may be incomplete or inaccurate. Please read KB article 1010716 (<http://kb.vmware.com/kb/1010716>) for more information.

If you are having a technical issue with 3rd party HW/SW and it is not found on this list, please refer to our 3rd Party HW/SW support policy at <http://www.vmware.com/support/policies/ThirdParty.html>.

NOTE: VMware supports Two-Socket Servers and Three-Socket Servers which are de-populated versions of Four-Socket Servers that are on the Systems Compatibility Guide for ESX Server 3.0.x. The de-populated Server Configuration must also be supported by the OEM. There is no change in the current Licensing model.

VMware will still sell Licenses in Two-Socket increments. To best utilize all Licenses purchased for Three-Socket Servers, we suggest deploying Server-based Licenses and deploying Three-Socket populated Servers in pairs so Licenses can be distributed evenly across them.

VMware works closely with each of its OEMs to drive towards mutual support of ESX at the time of announcement. Due to different product release cycles, levels of testing, and OEM agreements, not all OEM devices will be supported at the general availability date of a new version of ESX.

For Intel and AMD processors, VMware supports the processor series and the processor model that are listed with each server. Please check with the server vendor for specific CPU support.

RECOMMENDED CPU CLOCK SPEED

ESX 3.0:

- * Minimum CPU clock speed - 1500 MHz
- * Minimum CPU clock speed, Virtual SMP - 1500 MHz

ESX 3.0.1:

- * Minimum CPU clock speed - 1500 MHz
- * Minimum CPU clock speed, Virtual SMP - 1500 MHz

ESX 3.0.2:

- * Minimum CPU clock speed - 1500 MHz
- * Minimum CPU clock speed, Virtual SMP - 1500 MHz

ESX 3.0.3:

- * Minimum CPU clock speed - 1500 MHz
- * Minimum CPU clock speed, Virtual SMP - 1500 MHz

ESX 3.5:

- * Minimum CPU clock speed - 1500 MHz
- * Minimum CPU clock speed, Virtual SMP - 1500 MHz

ESX 3i Embedded:

- * Minimum CPU clock speed - 1500 MHz

* Minimum CPU clock speed, Virtual SMP - 1500 MHz

ESX 3i Installable:

* Minimum CPU clock speed - 1500 MHz

* Minimum CPU clock speed, Virtual SMP - 1500 MHz

VMware Fault Tolerance (FT) is a component of VMware vSphere™ that ensures continuous availability for virtual machines against hardware failures. VMware FT creates virtual machine "pairs" that run in lock step - mirroring the execution state of a VM. Support of VMware FT varies by system. Please review the system details to determine its specific support for VMware FT.

Server Device and Model Information

The detailed lists show actual vendor devices that are either physically tested or are similar to the devices tested by VMware or VMware partners. VMware provides support only for the devices that are listed in this document
